

CLAIMS

1 1. (Currently Amended) A blister pack for receiving and containing an article to
2 be packaged comprising a front part having a recessed portion, a back part having a
3 relieved portion adapted for insertion into the recessed portion of the front part for
4 closure of the pack, and co-operating locating means on the front and back parts
5 respectively to maintain the pack in a closed condition; wherein the locating means
6 comprises an abutment on the inner wall surface of the recessed portion of the front part,
7 and a co-operating abutment on the outer wall surface of the relieved portion of the back
8 part, the inner and outer wall abutments being located thereon such that they become
9 inter-engaged to close the pack only when the back part is contained wholly within the
10 recessed portion of the front part; the abutment on the inner wall surface of the recessed
11 portion of the front part extends inwards from said wall surface [~~to a greater extent~~] to at
12 least as great an extent than that by which the abutment of the relieved portion of the
13 back part extends outwards from the outer wall surface thereof.

1 2. (Original) A blister pack according to Claim 1, wherein the front part has a
2 flange extending around the rim of the recessed portion.

1 3. (Original) A blister pack according to Claim 2, wherein the flange includes an
2 aperture for suspension of the blister pack upon a display hook.

1 4. (Previously Presented) A blister pack according to Claim 2, wherein the
2 flange includes a deformation of material in a peripheral region to provide the appearance

3 of a weld when the abutments are inter-engaged.

1 5. (Previously Presented) A blister pack according to Claim 1, wherein the
2 abutment of the front part comprises a continuous ridge protruding inwardly from the
3 wall surface of the recessed portion.

1 6. (Previously Presented) A blister pack according to Claim 1, wherein the
2 abutment of the back part comprises a continuous narrow flange protruding outwardly
3 from the relieved portion.

1 7. (Previously Presented) A blister pack according to Claim 1, wherein the front
2 and back parts of the pack are connected together by an integral hinged portion, the entire
3 pack being formed by deformation of a single sheet of translucent plastics material.

1 8. (Previously Presented) A blister pack according Claim 1, wherein the front
2 part, on its inner or outer surface, has a surface texture to render the front part translucent
3 with reduced transparency.

1 9. (Original) A blister pack according to Claim 1, wherein the front part has a
2 stepped recess forming a plinth with an outer flange extending peripherally around the
3 plinth.

1 10. (Previously Presented) A blister pack according to Claim 1, wherein the
2 respective abutments of the front and back parts become inter-engaged with a snap action
3 when the pack is closed.

1 11. (Canceled)
